About Us

Terralec have been supplying staging, theatre lighting, effects lighting, audio equipment and accessories to schools, drama groups, theatres and all areas of the entertainment industry since 1989. As such we have an established reputation as a reliable, low cost supplier with excellent after sales service. With over 20,000 customers, Terralec has sufficient buying power to offer well priced original products from a range of over 5000 stock lines.

Our Products & Services

Terralec know that every customers needs are different, and as such we can offer a flexible approach to both supply and installation of any sound, lighting & staging equipment, including curtain track & curtains.

Our vast product range enables us to offer complete off the shelf systems for your own installation, (offered with full technical support of course), or alternatively a dedicated member of our technical Installation team can visit your premises and find the right solution for your requirements.

After an on-site consultation, our friendly sales team will compile a quote and proposal matching your specifications. Our install team are happy to work alongside local electricians and in house technicians where preferred.

Our Work with Schools & Colleges

Terralec realise that flexibility is often required from one system within the school environment. We appreciate that the one hall may be used for dance, drama as well as an array of exciting productions and as such can offer versatile products and systems to meet with your individual requirements.

Modern schools often have eager students, willing to learn lighting control that can play a large part in school productions. We are aware that not all schools have dedicated lighting technicians, but in fact use their own teaching staff to operate such facilities. With this in mind, we offer a wide selection of products designed to meet the needs of the end user, both in terms of safety and functionality. Our dedicated technicians will take the time to discuss your requirements and will recommend a choice of products to fit with the schools' individual criteria.

A superb installation service:

- Friendly approachable sales team.
- Appointment to survey area.
- Preliminary discussion of what's required.
- A structured consultation undertaken.
- Expert recommendations made.
- A thorough quotation supplied
- Discussion to see if this meets requirements.
- Full install taken place.
- Demonstrations provided to show operation.
- Second to none after sales care.

The Vision...

Terralec recently completed a complex installation for the new International School of Aberdeen, incorporating a large main theatre, black box theatre, band, drama and music rooms.

The Installation Process...

Our technicians undertook a vast task which stretched across several months in order to design, implement and install a durable and sustainable sound and lighting project that could be beneficial for teachers and students alike.

The End Product...

The Terralec team felt privileged to have been asked to undertake and work on this project. The school now has some of the best facilities for drama and music students in the UK, and the excellent teaching team at the school now have all the tools they need to create stunning drama and music productions. It took a lot of time and effort, but as you can see it was worth it in the end.

Terralec were involved in an earlier installation at the old school and were asked back, initially as consultants and then as the main contractor for the sound and lighting equipment. Early on in the design process, it was decided to use LED lighting where possible, resulting in seamless colour changing and much reduced power consumption.

All the main stage lighting and curtains can be dropped to floor level on bespoke Doughty hoists. This allows students and technicians to adjust and change lighting arrangements without working at high level. All the curtains can be independently operated, allowing for curtains to be replaced by scenery drops or other effects and then electronically winched out of the way.

The theatre lighting is DMX operated from a complete desk in the main control room with Cobra, Selecon and BriteQ luminaries providing the light. Any dimmers were mounted near the fittings, to reduce cabling, with most of the power wiring concealed in pre-wired bars, making a neat installation.

A large multi-channel sound system is also included in the main auditorium with 12 channels of Trantec radio microphone, a 36 channel desk, large JB Systems amplifier rack and Proel main speakers. The final remit for the project included facilities for single person presentations or full stage musical productions, so there are plenty of audio facilities for every scenario.

Away from the main auditorium, the black box theatre presented an opportunity for a free thinking theatre. A clear floor space was essential, so impromptu floor props could be used, so most of the lighting was fitted to a square rig that could be lowered to the floor. All the controls were moved to a balcony position, maintaining the open floor space. Once again most of the fittings were Cobra LED floods and spots with very low heat radiation and power consumption.

There are three other rooms in daily use by the school, the band, music and drama rooms. All the rooms have the same mobile sound reinforcement system, with facilities to multi-record and play back from a number of music sources. Keeping all the units the same makes it possible to share technical expertise between staff and students.

The Drama room also includes a small lighting rig and in keeping with all the other lighting system in the school, it can be dropped on a Doughty winch to floor level.

Some of our most Popular products:

Stage Lighting & Control

From individual LED par cans through to complete kits, including cables stands & controllers. Our stage lighting and lighting control desks remain among our most popular school and youth club products.

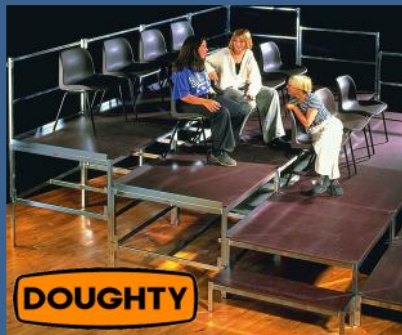

Using our expertise in school lighting, we have compiled a wide range of ready-made kits for off the shelf supply. Alternatively you can select from any combination of par cans, theatre spots, suitable controllers and fixings for install or supply.

Our dedicated sales and installation team will be happy to discuss your requirements and will talk you through the individual options. We can work to most budgets to create a complete and versatile stage lighting system.

Stage Curtains & Track

Terralec are able to quote and supply custom made stage curtains to meet with your individual requirements. Many different styles, sizes, fabrics and colours are achievable with a choice of hooks, chain weights and ties.

As part of any installation or as a straightforward supply, Terralec can offer a range of curtain tracks including all products from the Doughty curtain track range. This includes the popular six track modular system which is suitable for a wide range of stage and studio applications. Many types of track, runners, drivers and pulleys are available. One of our dedicated technicians will be happy to discuss your individual requirements and arrange a quote for you.

Doughty Easydeck Staging

Easydeck is a modular system, which provides a quick and efficient solution to the problems normally associated with temporary staging. Designed primarily for ease of use, coupled with a high degree of strength and versatility, Easydeck is suitable for a wide variety of applications, ranging from corporate presentations and fashion shows, through to school plays, live gigs and audience tiers. Furthermore, the reversible weather-proof deck tops and black frames make Easydeck the perfect choice for outside events of all descriptions.

The deck panels have a non-slip weave surface with a smooth brown reverse. The modules are lightweight and can be easily positioned and assembled by one person. Easydeck modules are available in a range of deck configurations and heights, which when utilised in conjunction with the units have the ability to stack securely, which in turn allows the creation of some very dramatic staging effects. Easydeck has been developed after extensive consultation with rental companies and end-users alike. Accordingly it is a minimum maintenance system, which does not require nuts, bolts or tools of any kind in its final assembly.

Terralec offer all parts to make any Easydeck stage assembly. We also offer pre-designed kits. Our sales team will be happy to assist you with any design ideas and advise you of all parts required. Why not request one of our model sample kits so you can see just how flexible this system can be.
