November 2009 Sees the Launch of the New Cobra Range

Terralec are proud to announce the launch of the new Cobra Brand. During the last year, the technical and buying teams at Terralec have commissioned a new range of products, designed specifically with their customers' needs in mind, taking into account quality, ease of use and price.

The Cobra Brand is divided into three separate categories:

Cobra Case is a collection of flight cases and padded bags, some of which replace existing Terralec products, but there are also many new designs and improvements to provide useful solutions for entertainers on the move! Much attention to detail has been applied. The padded bags are thoughtfully designed, with internal straps, good quality zips and comfortable shoulder straps being just some of their outstanding features. The flight cases are of rugged design, featuring, among other things, reinforced corners, strong sprung handles and heavy duty butterfly catches.

Cobra Acoustic currently has two ranges of loudspeaker. The VIP Series is designed for installation into any venue where sound levels and requirements change throughout the day. The series works well for speech announcements or background music, but is equally at home providing good quality sound for bars and clubs, effortlessly moving your venue from day into evening with the same compact sound system. The CFR Series is a range of loudspeakers, suitable for either fixed installations or mobile use. With an emphasis on reliability and good sound quality, the range covers most requirements for the entertainment industry. Starting with a compact full range 10" through to a 500 watt sub-bass cabinet. With massive bass drivers, flying points and good quality crossovers being just a few of their many attractive features.

Cobra Lighting offers a range of cleverly engineered LED lighting, which works well in both the entertainment and display environment, making them suitable for stage work, as well as bars, boutiques and so on. The high intensity output and colour consistency of these products puts them a cut above the rest. The range also includes the ZIP7, a neat LED flower effect, plus a simple, but effective, handheld controller, the Smart43.

So, for good quality, innovative products at sensible prices, just look for the snake!
